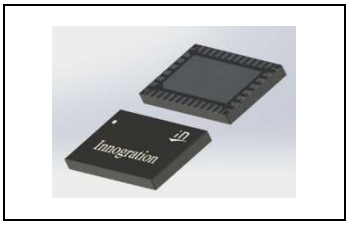
3.8-4.2GHz, 100W, 50V GaN matched PA Module

Description



The SMBV3842-100 is a 100-watt, integrated 2-stage Power Amplifier Module, designed for 5G massive MIMO applications, with frequencies from 3.8 to 4.2GHz. The module is 50 Ω input fully matched and output partially matched, and requires minimal external components. The module offers a much smaller footprint than traditional discrete component solutions，with much less sensitivity for production, housed in 10*6mm cost effective plastic open cavity package, and heat dissipated by copper flange.

The module incorporates advanced Doherty circuit delivering high power added efficiency for the entire module at 16W average power according to normal 8 dB back off.

Innogration owns the patents for internal Doherty architecture, and related plastic open cavity.

- Typical Performance of Doherty Demo (On Innogration fixture with device soldered with grounding vias):

VDS= 50V,Idq_main=55 mA Vgs-main=-3.35V. Idq-driver=21mA Vgs-driver=-3.10V Vgs-peak=-5.1V.

Notes:
(1) The thermal resistance is acquired by our company's FEA model,which was calibrated by IR measurement,the value shall be applied to reliability.
(2) The reference Tcase temperature 85℃ is apply on the backside of package.
(3) If the device soldering onto the 20mil Rogers PCB with 108×Φ0.25mm via hole beneath the package backside and the reference temperature Tcase（85℃） apply on the groundside of the PCB, the total thermal resistance Rθ JC (TBD)℃/W.
(4) The power dissipation in the table is overall dissipation which includes Carrier PA, Peaking PA and driver PA..
